

Prabhat Kumar

Java Backend Developer

+91 9663076023 | mailtoprabhat72@gmail.com | Bengaluru, India | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Proactive Java Backend Developer with 3 years of experience in designing and implementing high-performance RESTful APIs using Spring Boot and Hibernate. Expertise in database management (MySQL, SQL), cloud deployment (AWS EC2, S3, RDS), and version control (GitHub). Proficient in developing robust CRUD functionality, implementing security (JWT), and utilizing tools like Postman and Docker. Seeking immediate, challenging opportunities.

WORK EXPERIENCE

Java Software Developer, Full-time

Jan 2023 – Jan 2026

Netcore Cloud (Onsite)

Leveraged Java, Spring Boot, Hibernate, API, AWS, MySQL, and SQL, to contribute to core product development in a high-growth environment.

- Developed and maintained scalable backend services using Spring Boot, ensuring high availability and fault tolerance.
- Integrated AWS services (EC2, RDS, S3) for deployment, database management, and cloud storage, significantly enhancing application performance and reliability.
- Designed and optimized complex SQL queries and database schemas in MySQL using Hibernate for efficient data persistence and retrieval.
- Collaborated with cross-functional teams to define, design, and ship new features, adhering to agile methodologies and best coding practices.

Project: Real Estate Listing & Blog Management System

Role & Responsibilities:

- Led backend development for the blog module within a team of 8 engineers.
- Designed and implemented REST APIs for creating, editing, updating, and managing blog posts.
- Built database tables and relationships for blogs, comments, and user actions, optimizing the schema for MySQL.
- Applied Spring Security + JWT for secure API access and implemented like/dislike functionality to boost user engagement.
- Tested APIs, debugged effectively, and optimized the code using Postman.
- Technologies:** Java, Spring Boot, Hibernate, MySQL, RESTful APIs, Maven, Postman

PERSONAL PROJECT

Cafe Management System (Personal)

- Developed the backend using Spring Boot for a café management system, enabling seamless user-admin interaction.
- Implemented secure login & authentication using Spring Security & JWT to prevent unauthorized access.
- Designed product management features, including inventory tracking, and integrated role-based access control (RBAC).
- Enabled bulk product upload from Excel using Apache POI, improving admin efficiency.
- Technologies:** Java, Spring Boot, Hibernate, MySQL, RESTful APIs, Maven, Postman

TECHNICAL SKILLS

- | | |
|--|---|
| • Programming Languages: Java, SQL | • Development Frameworks: Spring, Spring Boot |
| • Web Technologies: RESTful API | • Development Tools: Eclipse, IntelliJ IDEA, VS Code |
| • Cloud Services: AWS Cloud | • Other Tools: Docker, Postman, JIRA, Agile |
| • Database Technologies: MySQL, MongoDB | • Architecture: MVC, Microservices (basic understanding) |
| • Version Control: GitHub | • ORM & Persistence: Hibernate, JPA |

EDUCATION

BE in Computer Science & Engineering

Visvesvaraya Technological University (CGPA: 7.2)

2019 – 2023

Bengaluru, India

CERTIFICATIONS

- J.P. Morgan Software Engineering Virtual Internship (Oct '25)
- Datacom Software Development Virtual Internship (Oct '25)
- Electronic Arts Software Engineering Virtual Internship
- AWS Solutions Architecture Virtual Internship
